JK Audio BlueSet 4-Pin & 5-Pin Wireless Headset Interface

JK Audio introduces the BlueSet™ series of intercom headset adapters using Bluetooth Wireless Technology. These headset interfaces plug directly into most Party-Line (PL) belt packs, replacing the wired headset. A 3.5 mm stereo headset jack contains a mic level output signal suitable for recording, with the beltpack headphone signal on the left channel, and the Bluetooth return signal on the right. A switch selects between connection to a 3rd party Bluetooth headset or a cell phone. **Headset Connect:** Pair BlueSet to your Bluetooth headset. Leave your belt pack on the desk as you walk around the room. Some Bluetooth headsets allow you to switch between two phones, or in this case, switch between your intercom and your cell phone. **Phone Connect:** Pair BlueSet to your cell phone to extend your system around the world. The belt pack Mic/Talk button controls audio from the cell phone into the intercom system.

JK Audio Wireless Bluetooth Headset

Extend your range of mobility. After extensive field testing, we couldn't find a headset that matched the performance of our BlueSet. The maximum range of Bluetooth connectivity on most mobile phones is only 10 ft, consequently, most headsets were designed to work well within this tight circle. Outside of this circle, they experience dropouts and noise that render the connection useless. The full range of a Bluetooth connection is determined by the weaker of the two paired devices. We tested several headsets that slyly feature ranges that exceed the range of your phone. Although some models offered ranges up to 30 ft, there were often compromises in quality, comfort, and performance. We weren't willing to accept this sacrifice.

There are many attributes that contribute to the performance of a Bluetooth headset. The range, voice quality, background noise suppression, and battery life of our new BSET-HS1 have been optimized for use with the JK Audio BlueSet series. BSET-HS1 is compatible with any standard Bluetooth device that supports the Headset profile. We can't promise great distances with thousands of models of mobile phones when the phone may be the limiting factor. We CAN promise excellent sound quality and extended range when used with the JK Audio BlueSet series.

RTS

RTS Single-Sided Premium Lightweight Headset

New from RTS, MH single- and dual-sided headsets combine a unique, multi-functional modular design with low-profile, lightweight construction. Equipped with professional-quality headphone transducers and a noise-canceling microphone, the MH series provides exceptionally clear communications performance for applications including live remote or studio broadcasting, film, TV and theater intercom.The MH series' innovative design allows the user to switch headset modules according to their needs. This means the headset isn't limited to studio or venue communications: microphone and listen-only modules can be quickly and easily replaced with a music/audio module, allowing connection to MP3 players, GPS and many other audio applications.
